Term	Course Number	Course Name	1.Knowledge Base	---1a. Demonstrate understanding of concepts in mathematics	---1b. Demonstrate understanding of concepts in natural science	---1c. Demonstrate understanding of engineering fundamentals	---1d. Demonstrate understanding of specialized engineering knowledge	2. Problem Analysis	---2a. Formulate a problem statement	---2b. Develop models to solve engineering problems including identifying	---2c. Critically evaluate solutions of engineering problems	3. Investigation	---3a. Design experiments to investigate complex engineering problems	---3b. Gather information from relevant sources to address complex engineering problems	---3c. Synthesize information to reach valid conclusions	4. Design	---4a. Define design requirements and specifications for complex, open-ended engineering problems	---4b. Criticaly evaluate and compare design choices	---4c. Generate and refine potential solutions to complex, open-ended design problems	5. Use of Engineering Tools	---5a. Select appropriate engineering tools , considering their limitations	---5b. Modify and/or create appropriate engineering tools, identifying their	---5c. Use engineering tools appropriately	6. Individual and Team Work	---6a. Contribute as an active team member or leader to complete	---6b. Collaborate with others to complete tasks effectively as a team	7. Communication Skills	---7a. Orally present information within the profession and to society at	---7b. Communicate in a written format within the profession and to	---7c. Interpret information, including instructions	8. Professionalism	---8a. Articulate the roles and responsibilities of the professional engineer in society with reference to the protection of the public and its interest.	---8b. Describe the importance of codes, standards, best practices laws and regulations within engineering problems.	9. Impact of Engineering	---9a. Identify the relevance of and uncertainty associated with the	---9b. Analyze the social, health, safety and environmental aspects of an	10. Ethics & Equity	---10a. Identify ethical and unethical behavior in professional situations	---10b. Identify how an engineer is accountable to multiple stakeholders in engineering practice.	---10c. Identify equitable and inequitable situations or behaviors	11. Economics & Project Management	---11a. Apply project management techniques in engineering projects, with attention to risk and change.	---11b.Perform economic analyses of engineering projects with attention to uncertainty and limitations.	12. Life-long Learning	---12a. Identify gaps in their knowledge, skills and abilities	---12b. Obtain and evaluate information or training from appropriate	---12c. Reflect on the use of information received
