LEADING THE CREATION OF NEXT GENERATION DRUG DELIVERY.

“Using an *in-vitro* model which reconstructs a human eye, research into the reaction between the eye and biomaterial, such as a contact lens, will reduce the need for animal testing and expensive clinical trials. The results will eventually lead to better drug delivery systems and unique therapies for glaucoma and cataract patients.”

— PROFESSOR MAUD GORBET, Centre for Bioengineering and Biotechnology

Become part of our worldwide reputation for research. Our graduate degree programs invite exceptional people to advance solutions for real-world problems.
