course outline

last updated September 8, 2021 6:06 PM

Territorial Acknowledgement

We acknowledge that the School of Architecture is located on the traditional territory of the Neutral, Anishinaabeg and Haudenosaunee peoples. The University is situated on the Haldimand Tract, the land promised to the Six Nations that includes 10 kilometres on each side of the Grand River. (see references here: <https://uwaterloo.ca/engineering/about/territorial-acknowledgement>)

Course Description:

This is an introduction to building construction dealing with the systems surrounding the making of buildings, building science, soils, foundations, wood frame systems and masonry systems. The course begins with an historical introduction of the primary materials of stone, steel and reinforced concrete to discover the impact of their development on Architectural design through the past 300 years.

Students will

- keep a detailed sketchbook of examples and details addressed in class
- prepare a sketch per week of an aspect of construction/materiality/the city
- complete an end of term technical drawing assignment

There will be an emphasis on developing communication skills through sketching - including both observed situations as well as detailed sketches of building construction assemblies.

Teaching Assistants: [Iva Mema](#) and [Nidi Metaj](#)

General Course Requirements:

This course is being delivered in a hybrid format. There will be in person lectures for all students who can attend in person (which is strongly encouraged). I will simultaneously be delivering the lecture online via Webex. That content will later be posted to the course website (below) for review or access for students who were unable to attend synchronously.

The most important thing that you can do is to attend (synchronous) or watch (asynchronous) the weekly lectures. To this end the major course requirement will be to take annotated (meaning sketches and words) notes from the lectures. ALL notes are to be *taken by hand in your required sketchbook*. No typed notes permitted unless you have authorization from the disabilities office. Sketchbooks will be scanned/photographed for submission and graded on their completeness as well as neatness. The sketchbooks have been normally submitted as a graded component at the end of the term, however this year, to ensure that you keep up with the work, you will be required to make PDFs of your notes pages EACH WEEK submit these to LEARN. Cellphone shots are fine as long as they are legible. The TAs will evaluate and provide feedback on a week by week basis. The notes are due to be submitted by midnight on the Wednesday, same day as the lecture occurs.

Additionally there will be a sketch assignment each week. This is a full page sketch in the medium of your choice, to be made in the same sketchbook, of an assigned aspect of building construction, topic noted in the course outline below. These will be posted on another Trello class board, again providing a class gallery of your work.

As time permits, I will do some live detail sketches in class, and these should also be included in your sketchbook as part of the annotated notes. The final term project will require you to make a technical drawing and this information will be critical for your work.

Class Times:

The class runs from 9:30am to 12:30pm on Wednesdays. As I will be recording and uploading the lectures for asynchronous students, I have decided to break the lecture into three 50 minute-ish segments. I will open the Webex space 15 minutes before class to allow people to arrive, to give open time for questions, chatting with classmates, etc. I will have 10 minute breaks after each segment to allow for the recording, coffee/bathroom breaks, stretch of legs, etc. Take the time to step outside during the break. Fresh air makes for better minds.

Course Time Zone

All dates and times communicated in the document are expressed in Eastern Time (Local time in Waterloo Ontario, Canada). From September 8 - October 24 2020 times are indicated in Eastern Daylight Time (EDT, UTC-4:00) and from October 25 - December 31 2020, times are indicated in Eastern Standard Time (EST, UTC-5:00)

Please feel free to text questions into the chat box on Webex during the lecture. Let me know if I am going too fast or if you need a term clarified.

Office Hours:

I am happy to take questions during the 15 minutes prior to class and will keep the Webex room open for 15 minutes after class. If you wish to contact me personally, you can email, anytime tboake@uwaterloo.ca

Learning Outcomes:

There are some clear things that you should be able to do or know by the end of this course. You only have two courses in Building Construction in this degree. They both happen in first year. You will be expected to understand fairly detailed concepts and details of construction by the end of both courses.

1. The first 3 lectures are more historically based and trace the impact that invention in the area of structural materials had on the development of modern architectural design. You should be able to select a structural material and understand its design implications - benefits and limitations - when you start any design project. Design works best if you have materiality in mind when looking at the blank page.
2. Understand the critical role of technology as it informs architectural design. From Building Science, to laws, rules, etc - show that you can include these in your design process and thinking. Drawings are comprised of lines, but those lines infer materials.
3. We will look at low rise building systems this term. So be able to detail a residential shallow foundation. Be able to understand the framing of a light wood frame building and draw it both as a wall section and as a 3D axonometric. Understand the role of masonry and differentiate the detailing of load bearing versus veneer systems.
4. When you design and detail a building you don't do this from memory. You surround yourself with information and guides. You should know where to go to look for information on technical building requirements.

Course Materials:

This web page will be updated each week as required, so please check it.

[Link](#) for Webex access to the synchronous lectures.

The recordings of the lectures will be posted to this page and you will need a password to access.

Links to the Trello boards are located in TEAMS due to privacy/access restrictions.

Date	Topic and Assignments
	For a BONUS mark of 1% please log into LEARN and provide a profile picture. Has to be done before September 30!
1 Sept 8	<p>OVERALL INTRODUCTION TO THE MECHANICS OF THE COURSE</p> <p>INTRODUCTION: FROM TECHNIQUE TO TECHNOLOGY Stone Construction: General Principles and Stereometry <i>Architects of note: Brunelleschi, Palladio, Soufflot</i> <i>Material nature of stone: compressive</i></p> <p>READ: <i>Course Notes:</i> Stone Construction link Intrinsically Linked through Materiality link <i>Internet:</i> The Mystery of the Pyramids link (what do YOU think?) More on Vitruvius link</p> <p><i>50 Architects You Should Know: Brunelleschi, Bramante, Alberti, Michelangelo, Bernini, Palladio, Wren, Gaudi, Jefferson, Schinkel</i></p> <p>Note: The Sketch is due to be posted on Trello and the copy of your notes are due to be uploaded to the LEARN Dropbox before the beginning of the next week's synchronous class.</p> <p>SKETCHING ASSIGNMENT: A STONE DETAIL/BUILDING SKETCHES FOR THIS CLASS CANNOT BE SUBMITTED FOR ANOTHER CLASS. SKETCHES ARE TO BE DRAWN FROM LIFE, NOT PHOTOS.</p> <p>Recording of Intro and Stone Lecture Part 1</p> <p>Recording of Stone Lecture Part 2</p> <p>PDF of powerpoint (note that I didn't get this complete so will talk to the last part of the Stone lecture at the beginning of next week's class)</p> <p>The PDFs of the lecture notes are DUE to the LEARN Dropbox by midnight on Tuesday, Sept 14.</p> <p>The jpg or PDF of the sketch is due to the LEARN Dropbox by midnight on Tuesday, Sept 14. This is also to be posted on the Trello Board under your name along with a selfie.</p>
2 Sept 15	<p>IRON AND STEEL: THE CREATION OF THE STRUCTURAL SKELETON AND THE EVOLUTION OF MODERNISM An historical investigation of the invention of iron and steel framing systems and the ramifications on modern architectural conceptual design theories and implementation. <i>Architects of note: Behrens, Gropius, Mies, any High Tech architects like Foster, Rogers, Piano</i> <i>Material nature of steel: tensile</i></p> <p>READ: Allen: Chapter 11: Steel Frame Construction Course Notes: Steel images/course_pdf/172-ch5.pdf</p> <p><i>50 Architects You Should Know: Ledoux, Sullivan, Burnham, Horta, Gropius, Mies, Neutra, Pei, Rogers, Meier, Foster, Herzog&deMeuron, Gehry, Koolhaas, Nouvel</i></p> <p>SKETCHING ASSIGNMENT: SKETCH SOME EXPOSED STEEL DETAILS</p>
3 Sept 22	<p>THE EVOLUTION OF REINFORCED CONCRETE AND ITS CONTRIBUTION TO MODERNISM An historical investigation of the invention of reinforced concrete and the ramifications of the monolithic structure on</p>

	<p>modern design theories and construction practices. <i>Architects of note: LeCorbusier, Pier Luigi Nervi, Eero Saarinen</i> <i>Material nature of concrete: compressive</i></p> <p>READ: Allen: Chapter 13: Concrete Construction Course notes: Reinforced Concrete images/course_pdf/172-ch6.pdf</p> <p><i>50 Architects You Should Know: Wright, Perret, Le Corbusier, Kahn, Niemeyer, Saarinen, Ando, Hadid, Ito, Tange</i></p> <p>Info on Brutalism</p> <p>SKETCHING ASSIGNMENT: SKETCH SOMETHING CONSTRUCTED IN REINFORCED CONCRETE THAT HAS SOME TEXTURE.</p>
4 Sept 29	<p>MAKING BUILDINGS/DESIGNING BUILDINGS <i>The Process; Zoning; Codes; Drawings</i></p> <p>THE RESIDENTIAL PROJECT: Building and fire code issues as they apply to housing.</p> <p>BARRIER FREE DESIGN: It is a legal requirement that we design for barrier free in all public buildings, no matter how large or small. This includes interior and exterior requirements.</p> <p>https://www.constructioncanada.net/a-practical-guide-to-barrier-free-washrooms/</p> <p>City of Toronto Guide for Barrier Free Design</p> <p>READ: Fundamentals of Building Construction: Chapter 1: Making Buildings Course Notes: Regulatory Determinants link Canadian Wood Frame House Construction: p. 2-18 <i>Internet:</i> Have a look at the Official Plan for the City of Toronto link</p> <p><i>50 Architects You Should Know: Aalto, Johnson, Pei, Rossi, SOM, Libeskind</i></p> <p>SKETCHING ASSIGNMENT: SKETCH SOMETHING THAT LOOKS ILLEGAL IN TERMS OF THE WAY THE BUILDING IS SITUATED ON A SITE OR CONSTRUCTED</p>
5 Oct 6	<p>THE EVOLUTION TOWARDS CONTEMPORARY CLIMATE RESPONSIVE DESIGN: An Introduction to the Science of Buildings Buildings must not only work from a cultural and functional perspective, but they need to address fundamental issues of site, climate and sustainability. There is much to be learned from indigenous and vernacular architecture - that worked before the advent of modern AC and heating systems. The location and siting of the building must acknowledge solar orientation, the availability of wind for natural cooling, microclimate. Many buildings are designed to meet Green Building ratings.</p> <p>READ: Primitive Architecture and Climate: James Marston Fitch and Daniel P. Branch</p> <p>SKETCHING ASSIGNMENT: Design your own north arrow, graphic scale, and human scale figure</p>
Oct 13	NO CLASS - READING DAYS - AKA FALL BREAK
6 Oct 20	<p>INTRODUCTION TO BUILDING SCIENCE <i>Looking at the physics of the function of the building envelope that impacts detailing in a cold climate.</i></p> <p>READ: Canadian Wood Frame House Construction: Healthy Housing: p. 15-17 Vapour and Air Barriers p. 273-277 Thermal Insulation p. 255-278</p>

	<p>Ventilation p. 283-290 Course Notes: Building Science link</p> <p>SITING A BUILDING: PASSIVE CLIMATE FOCUS An introduction to passive site design - issues of climate, orientation, solar geometry, shading, natural ventilation, site materials</p> <p>SKETCHING ASSIGNMENT: Sketch an interesting device that can be used on a facade to shade the windows.</p>
7 Oct 27	<p>SOILS, EXCAVATIONS AND SURVEYING <i>The implications of site conditions on design, Introduction to the principles of surveying and how to read a survey</i></p> <p>FOUNDATIONS FOR SMALL TO MEDIUM BUILDINGS <i>An investigation of shallow foundation types as linked to building design strategy and choices</i></p> <p>READ: Fundamentals of Building Construction: Chapter 2: Foundations (excluding portion on deep foundations) Canadian Wood Frame House Construction: Location and Excavation p. 29-36 Canadian Wood Frame House Construction: Concrete Work p.37-42 Footings, Foundations and Slabs p.43-72</p> <p>SKETCHING ASSIGNMENT: An interesting exterior building detail</p>
8 Nov 3	<p>FOUNDATIONS FOR LARGER BUILDINGS A look at strategies for larger building foundations including, piles, caissons, micropiles, retaining wall systems, under pinning.</p> <p>SKETCHING ASSIGNMENT: Residential foundation (a real one or you can draw the detailed technical section from last week's class by hand)</p>
9 Nov 10	<p>AN INTRODUCTION TO WOOD CONSTRUCTION <i>The materiality of wood and the structural implications and potentials of wood systems; sawn framing (traditional) versus engineered wood (more recent)</i></p> <p>READ: Fundamentals of Building Construction: Chapter 3: Wood Chapter 4: Heavy Timber Frame Construction Canadian Wood Frame Construction: Protection and Care of Materials on Site p.73-76 Lumber and Other Wood Products p.77-82 Framing the House p.83-88</p>
10 Nov 17	<p>WOOD FRAME CONSTRUCTION <i>An in depth investigation of the making and detailing of the wood frame building</i></p> <p>READ: Fundamentals of Building Construction: Chapters 5, 6 and 7: Wood Light Frame Construction, Exterior and Interior Finishes. Canadian Wood Frame Construction: Floor Framing, Wall Framing, Ceiling and Roof Framing, Roof Sheathing and Coverings, Wall Sheathing and Exterior Finishes, Exterior Trim and Millwork p.89-190 Wood Resources link</p> <p>Interesting video of framing in Japan link</p> <p>SKETCHING ASSIGNMENT: SKETCH SOMETHING THAT SHOWS THE SKELETAL WOOD FRAME, PREFERABLY SOMETHING UNDER CONSTRUCTION OR EXPOSED TIMBERS. DO NOT ENTER A CONSTRUCTION SITE TO DO THIS.</p>

11 Nov 24	SOLID WOOD A look at heavy timber framing systems including post and beam construction, glue laminated timbers, mass timber and cross laminated timber. SKETCHING ASSIGNMENT: Heavy wood framing details.
12 Dec 1	AN INTRODUCTION TO MASONRY CONSTRUCTION <i>Introduction to the fundamentals of masonry construction, including brick and concrete block, modular sizing, terminology, building practices</i> READ: Fundamentals of Building Construction: Chapter 8: Brick Masonry Chapter 9: Stone and Concrete Masonry Links (for reference, not for the quiz): Brick Institute of America http://www.bia.org/ Hanson Brick (coursing charts and good general diagrams) http://www.hansonbrick.com/english/products/sizes_coursing_us.php
Dec. 20	Hand in for Final Term Project on LEARN - due before midnight.

Evaluation:

SKETCHBOOK: 44%

You are required to keep a sketchbook/notebook for the course. 8 ½" by 11" format is recommended with BLANK pages. Grades are allocated based upon notes and technical sketches taken from the lecture.

11 LECTURES: @ 4% EACH (2 marks for completeness, 2 marks for neatness/clarity)

SKETCHES: 10 @ 3% EACH

FINAL DESIGN: 26% a DRAWING

Late Penalties:

The weekly sketch and copies of your class notes are due prior to the subsequent week's class. A 24 hour grace period will be allowed to account for time zones and internet related issues that may impact submission. After 24 hours a grade of zero will be assigned.

For the Final Project late penalties of 5% per day will be applied, following the 24 hour grace period. After 5 days of lateness a grade of zero will be applied.

Reference Texts and other Materials:

The following texts will be used for BOTH Arch 172 and Arch 173 (Winter term).

CMHC. Canadian Wood Frame House Construction. Available as a downloadable PDF. [here](#)

Allen, Edward. Fundamentals of Building Construction: Materials and Methods.

Seventh Edition preferred. If you are using an older edition, please refer to the chapter titles (rather than chapter numbers) and read the appropriate sections. Honestly, whatever you can get your hands on will do. This is an expensive text but it is also used for Arch 173: Building Construction 2 and will serve as a reference for the balance of your student career.

50 Architects You Should Know. Prestel Press.

<http://www.amazon.ca/50-Architects-You-Should-Know/dp/3791340433>

Course notes. Available online. As linked throughout the course outline, or find them all here:
crsnotes.html

As there are no quizzes in the course you will be responsible for monitoring your reading of the accompanying texts. The Allen book is typically retained for the duration of this degree as it has a lot of helpful information. The CMHC Wood book will be helpful for your final term project. 50 Architects will help you understand more about the architects I reference in the lectures and help to build your vocabulary of terms/people.

Wood Resources:

Below are links to pdf copies of some fantastic guides put together by Canada Mortgage and Housing Corporation on different construction practices in Canada. They are fairly hefty in size, so download with a good connection. Each has a series of details contained within the text. The one on "Wood Frame" would be applicable to most areas of Canada. Since BC is so wet, they have developed a special set of details for BC construction. You could also refer to these for your work -- they are just "better" from a building science perspective. The BC guide also includes some more developed information on different assemblies. Those of you detailing roofs without attics, need to look in the BC guide under roof assemblies for a sandwich type roof that is comprised of rigid polystyrene insulation rather than batt insulation. You need to vent batt insulation as it can retain moisture and freeze/leak. Rigid polystyrene (the blue stuff that comes in boards) is a closed cell system and does not get waterlogged. It is used on flat roofs and below grade around foundations.

CMHC Best Practice Guides: [Wood Frame Guide](#), [BC Wood Frame Guide](#), [Brick and Block](#) and [Brick and Steel Stud](#)

All of the CMHC Best Practice Guides are available in binder as well as CD form in Musagetes.

Just looking for neat ideas of how to build in wood? Look at the Wood Design & Building periodicals in Musagetes!

Powerpoint Presentations:

The files listed below will take you to some interactive powerpoint files. Upload the files then go to the slide show mode. Every time you click your mouse, the detail will "build itself". You will be able to see all the materials and the sequence of assembly. They are all for wood frame with stucco or wood veneer. You will have to extrapolate the sequence as it applies to masonry veneer situations.

Avoidance of Academic Offenses

Fall 2021 COVID-19 Special Statement

Given the continuously evolving situation around COVID-19, students are to refer to the University of Waterloo's developing information resource page (<https://uwaterloo.ca/coronavirus/>) for up-to-date information on academic updates, health services, important dates, co-op, accommodation rules and other university level responses to COVID-19.

Mental Health Support

All of us need a support system. We encourage you to seek out mental health supports when they are needed. Please reach out to Campus Wellness (<https://uwaterloo.ca/campus-wellness/>) and Counselling Services (<https://uwaterloo.ca/campus-wellness/counselling-services/>).

We understand that these circumstances can be troubling, and you may need to speak with someone for emotional support. Good2Talk (<https://good2talk.ca/>) is a post-secondary student helpline based in Ontario, Canada that is available to all students.

Equity, Diversity and Inclusion Commitment

At the School of Architecture, we are committed to foster and support equity, diversity and inclusion. We recognize however, that discrimination does occur, sometimes through an isolated act, but also through practices and policies that must be changed. If you experience discrimination, micro-aggression,

or other forms of racism, sexism, discrimination against LGBTQ2S+, or disability, there are different pathways to report them:

A) If you feel comfortable bringing this up directly with the faculty, staff or student who has said or done something offensive, we invite you, or a friend, to speak directly with this person. People make mistakes and dealing them directly in the present may be the most effective means of addressing the issue.

B) you can reach out to either the undergraduate ([Nicole Guenther](#) or [Maya Przybylski](#)), graduate office ([Tina Davidson](#), [John McMinn](#), or [Adrian Blackwell](#)), or director ([Anne Bordeleau](#)). If you contact any of these people in confidence, they are bound to preserve your anonymity and follow up on your report.

C) You may also choose to report centrally to the Equity Office. The Equity Office can be reached by emailing equity@uwaterloo.ca. More information on the functions and services of the equity office can be found here: <https://uwaterloo.ca/human-rights-equity-inclusion/about/equity-office>.

Academic Integrity: To create and promote a culture of academic integrity, the behaviour of all members of the University of Waterloo is based on honesty, trust, fairness, respect and responsibility.

Grievance: A student who believes that a decision affecting some aspect of his/her university life has been unfair or unreasonable may have grounds for initiating a grievance. Read Policy 70 - Student Petitions and Grievances, Section 4, <http://www.adm.uwaterloo.ca/infosec/Policies/policy70.htm>

Discipline: A student is expected to know what constitutes academic integrity, to avoid committing academic offenses, and to take responsibility for his/her actions. A student who is unsure whether an action constitutes an offense, or who needs help in learning how to avoid offenses (e.g., plagiarism, cheating) or about “rules” for group work/collaboration should seek guidance from the course professor, academic advisor, or the Undergraduate Associate Dean. When misconduct has been found to have occurred, disciplinary penalties will be imposed under Policy 71 - Student Discipline. For information on categories of offenses and types of penalties, students should refer to Policy 71 - Student Discipline, <http://www.adm.uwaterloo.ca/infosec/Policies/policy71.htm>

Appeals: A student may appeal the finding and/or penalty in a decision made under Policy 70 - Student Petitions and Grievances (other than regarding a petition) or Policy 71 - Student Discipline if a ground for an appeal can be established. Read Policy 72 - Student Appeals, <http://www.adm.uwaterloo.ca/infosec/Policies/policy72.htm>

Note for students with disabilities: The Office for Persons with Disabilities (OPD), located in Needles Hall, Room 1132, collaborates with all academic departments to arrange appropriate accommodations for students with disabilities without compromising the academic integrity of the curriculum. If you require academic accommodations to lessen the impact of your disability, please register with the OPD at the beginning of each academic term. Once registered with OPD, please meet with the professor, in confidence, during my office hours to discuss your needs.
