## Introduction

---

The Guelph Community Wellbeing Survey was launched on June 20, 2012 when invitations to participate were distributed to 10,512 randomly selected households. The survey closed on August 18, 2012. During that time, 1,299 electronic and 111 paper surveys were completed by Guelph residents. Of the 1,410 surveys, 1,401 were deemed usable. This represents a response rate of approximately 14%.

The results presented in this technical report are comparisons of the responses to the questions based on two factors of interest: (1) *total annual household income* – households with total annual incomes of less than \$40,000 with households with total annual incomes of \$100,000 or more; and (2) *Ward* – the six Wards in the City. These comparisons are organised by the eight domains comprising the Canadian Index of Wellbeing: *Community Vitality, Democratic Engagement, Education, Environment, Healthy Populations, Leisure and Culture, Living Standards, and Time Use*. The data were weighted to ensure that results are representative geographically within the City of Guelph and that the gender distribution matched the City of Guelph 2011 census profile.

### ***Interpreting the results***

The report is organized by domain, and consists of tables showing either the distribution of responses across categories or the mean scores for each subgroup. To judge the extent to which subgroups differ in their distributions, the numbers shown in **bold** typeface in the last row of each table indicate how many people in Guelph and their percentage fall within each category. If there are not meaningful differences between income groups (or Wards) on the selected aspect of wellbeing, then approximately the same percentage should appear for each income group (or Ward).

For example, in the table on page 3 comparing lower and upper income residents on whether volunteered in the past year, 55.3% of the residents overall said they did volunteer. Among those residents in the upper income group, however, 59.1% indicated that they had volunteered compared to just 47.7% of residents in the lower income group, suggesting that more affluent Guelph residents are more likely to volunteer.

Similarly, when comparison are based on mean scores (e.g., table reporting mean number of close relatives, friends, and neighbours on page 11), we would expect to see very similar mean scores for each subgroup if they were *not* different from each other.

***Distribution of Lower and Upper Income Households by Ward***

The table below shows the distribution of responses for the two income categories – lower and upper income – across the Wards of the City. The sections that follow begin with comparisons based on household income for questions related to all eight domains then comparisons based on Ward.

By comparing just the lower and upper income groups in the City, those middle income households (i.e., with total annual household incomes of between \$40,000 and \$99,999) are excluded from the analyses. They represent 50% of the respondents to the survey.

**Low (under \$40,000 per year) and High Income (\$100,000 and greater per year) Households BY Ward**

**COMPARISONS OF LOWER AND UPPER INCOME GROUPS**

**Comparisons of Low (under \$40,000 per year) and High Income (\$100,000 and greater per year) Households**

In this section, households in Guelph that fall into two income categories – under \$40,000 per year total household income and \$100,000 per year total household income – are compared on each indicator within each domain of the *Canadian Index of Wellbeing (CIW)*.
