	COOP 6			
	1. Knowledge Base			
	1a. Demonstrate understanding of concepts in mathematics			
	1b. Demonstrate understanding of concepts in natural science			
	1c. Demonstrate understanding of engineering fundamentals			
	1d. Demonstrate understanding of specialized engineering knowledge			
	2. Problem Analysis			
	2a. Formulate a problem statement			
	2b. Develop models to solve engineering problems including identifying approximations, assumptions and constraints			
	2c. Critically evaluate solutions of engineering problems			
	3. Investigation			
	3a. Create investigative studies of complex engineering problems			
	3b. Gather information from relevant sources to address complex engineering problems			
	3c. Synthesize information from multiple sources to reach to reach valid conclusions			
	4. Design			
	4a. Define design requirements and specifications for complex, open-ended engineering problems			
	4b. Critically evaluate and compare design choices			
	4c. Generate and refine potential solutions to complex, open-ended design problems			
	5. Use of Engineering Tools			
	5a. Select appropriate engineering tools, considering their limitations			
	5b. Modify and/or create appropriate engineering tools, identifying their limitations			
	5c. Use engineering tools appropriately			
	6. Individual and Team Work			
	6a. Contribute as an active team member or leader to complete individual tasks			
	6b. Collaborate with others to complete tasks effectively as a team			
	7. Communication Skills			
	7a. Orally present information within the profession and to society at large			
	7b. Communicate in a written format within the profession and to society at large			
	7c. Interpret information, including instructions			
	8. Professionalism			
	8a. Articulate the roles and responsibilities of the professional engineer in society with reference to the protection of the public and its interest			
	8b. Describe the importance of codes, standards, best practices, laws, and regulations within engineering			
	9. Impact of Engineering			
	9a. Identify the relevance of and uncertainty associated with the different aspects (social, cultural, economic, health, safety, legal, environmental) of an engineering project			
	9b. Analyze the social, health, safety, and environmental aspects of an engineering project, incorporating sustainability considerations and environmental stewardship in making decisions			
	10. Ethics & Equity			
	10a. Identify ethical and unethical behavior in professional situations			
	10b. Identify how an engineer is accountable to multiple stakeholders in engineering practice			
	10c. Identify equitable and inequitable situations or behaviors			
	11. Economics & Project Management			
	11a. Apply project management techniques and other business practices in engineering projects, with attention to risk and change			
	11b. Perform economic analyses of engineering projects with attention to uncertainty and initiatives			
	12. Life-long Learning			
	12a. Identify gaps in their knowledge, skills and abilities			I
	12b. Obtain and evaluate information or training from appropriate sources			
	12c. Reflect on the use of information or training received
