

Tropical Glaciers and Climate

- a journey back into past centuries...

Tropical glaciers tell us about mid to upper troposphere climate in the low latitudes. Yet, most latitude concepts for studying glacier-climate interaction are not good for the tropical conditions. By combining various methods and looking into micro to macro scales, tools can be developed to reveal a particular and unique view into climate history of the low latitudes.

Dr. Georg Kaser, University of Innsbruck, Austria

Wednesday, March 3rd, 2010

4 p.m.—5 p.m. | Festival Room (SCH)

South Campus Hall, University of Waterloo, 200 University Ave. West, Waterloo, ON

Refreshments provided.
