

# COPYRIGHT AND YOUR THESIS

## Content you can use without permission

### CONTENT IN THE PUBLIC DOMAIN

The term "public domain" refers to works in which copyright has expired. In Canada, the term of copyright for most works is the life of the author, plus 50 years. The copyright length may vary depending on factors such as the type of work, the manner of publication and the date of creation.

### CONTENT WITH AN OPEN LICENSE

Creators may assign an open license (such as a Creative Commons license) or specific terms of use to a work that allows you to use the work given that you follow the conditions outlined. For example, many open access articles are assigned a Creative Commons license that allows users to reuse content from the article as long as the use of the work attributes the original creator.

**Remember!** Just because a work is freely available on the internet does not mean that it is in the public domain or that it is openly licensed.

### INSUBSTANTIAL AMOUNTS OF CONTENT

When you want to use part of a work, copyright only applies when the amount is substantial. This means that when you are using an insubstantial, or very small amount, such as a quote from a work, you do not need to ask permission.

# COPYRIGHT AND YOUR THESIS

## CONTENT YOU NEED PERMISSION FOR

In cases where you are using an entire work, such as a figure/illustration/image from a journal article, you need to ask permission from the copyright holder. This permission should be included in an appendix at the end of your thesis.

## HOW DO I ASK PERMISSION?

Most publishers provide some way of asking permission through the webpage that hosts the article. Usually a 'request permissions' button will be available, and will direct you to the service (such as the Copyright Clearance Center) that grants permission. For publishers where this is not available, or creators outside of academic publishing, look for a page on their website about copyright or permissions.

## CONTENT YOU'VE PUBLISHED

It is common for publications resulting from graduate student research to ultimately be reused as chapters in theses. In some disciplines, students publish manuscript based theses consisting of previously published work, and introductory and concluding chapters that contextualize their research project at large. You may need to obtain permission from the publisher in order to use previously published work in your thesis. In most cases, you will have transferred or licensed copyright in your article to the publisher.

When you published you likely signed or clicked-through an agreement with the publisher. That agreement will tell you what you can and can't do with your work. If you do not have a copy of your agreement, looking to the publisher's author copyright policy is helpful. [SHERPA/RoMEO](#) is a good place to start; it is a database of publisher copyright policies.

More detailed information is available on the [UWSpace guide](#).
