Welcome to Macroeconomics. This course provides an introduction to macroeconomic principles and analysis. Topics included for discussion are national income, economic growth, business cycles, money and the price level, unemployment and inflation, exchange rate, aggregate demand and aggregate supply, and fiscal and monetary policies. Upon successful completion of the course, students should be able to describe the fundamental macroeconomic concepts and variables, learn how to use basic macroeconomic models, differentiate between short run and long run fluctuations of output, and understand the workings of fiscal and monetary policies in the economy.

To get the most out of the course, students are strongly encouraged to attend *all* class lectures, participate in the discussion, and do the homework assignments. Knowledge of basic algebra is also required for the course. A specific timetable indicating which topics will be discussed on a specific lecture dates will not be provided. Our progress will depend on class ability and interest in the lecture materials.
