Trivia

Isolation and Loneliness

For the past year, people have been isolated more than ever. Even with things gradually opening up, feelings of physical and social isolation are still prevalent. It is important to understand and be aware of feelings of isolation and the effects they can have on your mental health and well-being.

Interpersonal isolation is isolation from other people. Interpersonal isolation is caused by lack of interaction with others and is similar to feelings like loneliness. Interpersonal isolation also relates to one's group identity, including whether one belongs to a group marginalized by society.

Intrapersonal isolation is isolation from oneself. It relates to feelings of being internally fragmented and can arise from traumatic experiences. This is the splitting of oneself off from themselves which can make it difficult for a person to be fully present in their relationships or with themselves.

Existential isolation refers to the gap that exists between people, no matter how close they are. The way you experience the world is unique to you, and there is an inherent gap between your experiences and understanding of the world and everyone else's.

Interpersonal isolation is the most obvious type of isolation we encounter, but it can be helpful to think about feelings of intrapersonal and existential isolation as well. Oftentimes our feelings of isolation are not solely due to lack of interaction with others, but also due to intrapersonal and existential causes. Feelings of isolation have increased significantly over the past year, and while things gradually reopening can help that, these feelings of isolation are not going to completely go away. There are many ways of dealing with feelings of isolation which can help, especially right now.

Accepting your situation and embracing your feelings

Acknowledging the reality of an unpleasant situation can help to reduce stress and allow you to make more clear decisions about how to move forward. Your feelings can tell you a lot, and you should try to embrace them. Embracing uncomfortable emotions can start to give you power over them and accepting unpleasant feelings can help you to work through them. Feelings and emotions are not inherently positive or negative, they represent the ways in which you are connecting to your environment. Uncomfortable feelings can signal what you need to do to make yourself more comfortable and understanding your emotions can allow you to better understand and improve your situation.

Keeping Busy

Creating a schedule can help to keep you occupied with things to do which can help with feelings of isolation. Planning out your work, leisure, and social events can keep you focused on what you're doing and help relieve feelings of isolation. Planning times to connect online with other people can be beneficial in combatting interpersonal isolation and loneliness as well.

Practicing Self-Care

Actively taking care of yourself and your mental health can help you deal with feelings of isolation. Self care can take many forms (which are discussed in more detail later in the Newsletter!) but in general, it consists of taking time to do things which make you feel good. Whether that's taking a bath, reading a book, organizing your workspace, or countless other activities, what's important is taking time for yourself. Self-care is not selfish! Taking breaks and doing things which make you relaxed and happy is important for your mental health. Making time for self-care is important for your mental health, especially in times of isolation where mental health tends to worsen overall.

Feelings of isolation are often difficult to handle, but they are normal and there are methods that can help you deal with them. For more resources on isolation and loneliness, you can visit the following sources.

Mind Your Wellness - Time Management

The ENGWellness team has partnered with the Student Success Office to bring you a Mind Your Wellness Session on the topic of time management. The session focuses on STEM-specific strategies for making schedules, establishing routines, studying, and sleep, and gives some tips specifically for studying for midterms. The study tips are widely applicable and will be especially useful once we arrive at final exams. The if you're interested in learning some strategies for managing your time, the session is available on [YouTube](#).

ENGWellness Foursomes Trivia

The ENGWellness team is excited to announce that our Foursomes Trivia game is running again this term! This trivia contest is running for four weeks, and started on July 5th. You can play in teams of 1-4 people and any students, staff, and faculty from ECE, MME, SE, or Nano are welcome to play. Check your email inbox for more details including the rules of the game.

[This is the link to sign your team up](#) (only one sign-up required per team)

And this is the link to the [current round](#) of trivia!

National Self-Care Day

National Self-Care Day – July 24th

Self-care activities can help you achieve balance in your life and relieve stress. Making time to be mindful of your wellbeing and take care of your mental health is important. Engaging in self-care practices can set you up better to deal with stress in the future. Self-care can take many forms, and it looks different for different people.

Self-soothing activities help you relieve stress and relax. Examples of such activities include:

- Watching a good TV show
- Eating a meal that you love (more on nutrition later in the Newsletter!)
- Listening to music
- Taking a shower or bath
- Applying a face mask
- Meditation
- Deep breathing
- Reading a good book
- Anything else that lets you be calm and relieve stress

Engaging your mind with a non-school activity can help take your mind off of things and relieve stress by redirecting your focus to something you enjoy. Being creative can engage your mind and help you let out emotions. Examples of activities which engage your mind or tap into your creativity include:

- Doing a crossword or sudoku
- Drawing
- Colouring
- Writing
- Singing or playing a musical instrument
- Knitting
- Playing trivia games online
- Any other activity which redirects your focus or lets you be creative

Connecting with other people is another part of self-care. These days, we have to be a lot more intentional about having social interactions. Getting together with friends online to play video games together or just to chat is a great way of having some social connections when you can't see people in-person. Going for distanced walks or getting together with friends at a park or in a backyard are great options for seeing people safely during COVID. Social interactions are important for mental health and intentionally devoting time to social interactions is an important part of self-care and staying connected to the world around you.

Physical activity can also help to relieve stress and improve your mental health. Taking time to be active and getting outside are great self-care activities and can be really beneficial! In case you missed it, you can read more about how physical activity and getting outside can affect your mental health in last month's newsletter.

Self-care is not a selfish thing to do. It's an important part of taking care of your wellbeing and it goes a long way toward relieving stress and improving mental health. Even when things get busy, it's a good idea to make some time in your schedule for self-care and looking after your mental health

Making Balanced Snacks and Meals a Priority

By Sandra Ace, MPH, RD
Health Services Dietitian

The COVID-19 pandemic has had interesting outcomes on eating. I have seen some positive pandemic-related food outcomes which are likely to improve people's health. With more time to cook and minimal opportunities to eat outside the home, cooking has become a newly-explored, surprisingly enjoyable pastime for some students. Many with whom I have worked have started cooking more and ordering less takeout food, trying simple recipes or using easy meal kits that deliver both ingredients and recipes to the front door. Not everything has been positive, however. For some, the pandemic and related isolation has increased feelings of anxiety, sadness, loneliness and/or boredom. I've heard from many students I counsel that the pandemic has increased stress-related or emotional eating.

It's not uncommon for appetite or eating habits to change when someone feels stressed. The University of Guelph, in a survey about COVID-related health outcomes, found that about 60% of adults and children were snacking more on foods like chips and cookies. Everybody reacts differently to stress, but there are many strategies that can help you cope. Be sure to get enough sleep (7 to 9 hours per night) and find ways to be active, even if it's a 15 minute walk in the fresh air or doing a short yoga or stretching class online. Keep up your connections with others, especially at mealtimes; sharing a meal virtually can help eating to be a more positive and enjoyable experience.

Make it a priority to eat at regular intervals during the day, ideally starting with breakfast. Skipping or not eating balanced meals can leave you hungry, low on energy and prone to less-healthy snacking. It's absolutely ok to plan for moderate portions of your favourite treats, enjoyed without guilt, but try not to overstock your kitchen with these. Shop mainly for nutritious snacks. Whether you are in an academic or a co-op term, choosing the right snacks can keep you energized, may help to decrease food cravings and can prevent extreme hunger that sometimes leads to overeating later on. Combining foods that contain some protein with fibre-rich carbohydrates is a smart snacking plan. Some ideas: replace a mid-morning donut or pastry with fresh fruit or raw veggies and a hard boiled egg, an afternoon snack of chips with mini carrots, some whole grain crackers and hummus or an apple with peanut butter, and cookies or ice cream in the evening with a serving of Greek or Icelandic (Skyr) yogurt topped with fresh or frozen berries.

Lastly, if you are struggling with stress-related eating concerns, be compassionate with yourself and know that you aren't alone. Campus Wellness can help you find supports. Make an appointment with one of our physicians or nurse practitioners, and ask about a referral to a registered dietitian, who can help you devise a nutrition action plan. Also, many resources available at Counselling Services can help you identify other, non-food related coping strategies. Setting small, achievable goals can help you make sustainable changes to your self-care routine.

Creative Outlets

The following is a blog post from the [ENGWellness Blog](#). Check it out for more reflections like this one!

One thing that has helped me a lot with my mental health, especially throughout the pandemic, is having creative outlets where I can create things and express myself outside of any school responsibilities or deadlines.

For me, the experience of sitting down at a piano and playing whatever's on my mind is cathartic. It allows me to express myself and release stress. Playing music lets my mind off of school and helps me stay calm. Music has been my main creative outlet, but it's certainly not the only one, and many people find similar value in creating visual art, writing, dancing, building things with their hands, and countless other activities. The simple act of being creative can help to relieve stress and take your mind off of other things.

I think part of the value in these activities comes in creating something for the sake of creating. So often our main motivation is external, coming from due dates for coursework or co-op application deadlines. I think it's important to engage in activities where your motivation is internal. When I make music, I'm not doing it for anyone else or because I have a deadline to meet, I'm doing it because it's something I love doing. Exercising the creative side of your brain isn't always a focus in STEM programs, and I think it's really valuable to spend time being creative outside of class. I know school is busy, and it's not easy to find time to dedicate to creative outlets, but it's a valuable experience, and it doesn't have to be a huge time commitment. Even spending 10 minutes making a quick drawing or singing a song or having a little dance party in your room can be a wonderful break from work and allow you to relax. I think over time, the benefits you get from letting your mind have a break from school to focus on being creative for creativity's sake will far outweigh the 10 minutes of study time you sacrifice.

I find the act of being creative to be incredibly motivating. It gives me something to care about and work on outside of school, and it's really rewarding to spend time doing it. In general, I find that I'm happier on days where I spend time doing something creative than days that I don't, and being creative has been particularly helpful in the past year. Being able to get lost in a creative space has helped me to take my mind off of what's going on in the world around me for a few minutes. I've found being creative to be a great way to fill my time in a fun, rewarding way, to keep me busy, which has often helped me to cope with feelings of isolation.

TED Talk Tuesdays

Over on the ENGWellness [Instagram](#), we're running a weekly series called TED Talk Tuesdays! Every week, we add a TED Talk we think is worth watching to this YouTube [playlist](#). These talks are a great way to take a short break from work and they give some really valuable information and insight. Check out the talks currently on the playlist and stay tuned for a new recommendation every Tuesday!

Engineers Without Borders: Alt Protein Cook-Along

Sign up to participate in our first ever Alt. Protein Project cook-along on Tuesday July 13th 7-8 pm EDT, brought to you by [Engineers Without Borders UW!](#) Join us in making a delicious Chocolate Mint Quinoa Berry Bowl together 😊. As we enjoy the food we made, we will be joined by representatives from UW Food Services and the UW Sustainability Office to discuss the environmental and health benefits of alternative protein foods! For more details, sign up for free using [this link](#). Hope to see you there 😊!

Content Archive

Check out our ENGWellness resources including mental health pages and PSAs. All resources as well as previous newsletters, can be accessed under the [Content Archive](#) tab on the ENGWellness website.
