Course Description:
Geography 202 is an introduction to the global economy and the discipline of economic geography. We begin by assessing the structure of the global economy and the approaches used by economic geographers to understand the global arrangement of economic activity. We then explore several contexts that have given rise to the global economic system and consider the evolving spatial distribution of its industrial sectors. We will then discuss the global economy in the context of changing regimes of work with particular attention paid to questions of difference in terms of race, sex, and gender. We conclude with a discussion of the present and future implications of economic globalization for both developed and less developed nations.
