### Section 1 - Chemical Product and Company Identification

**MSDS Name:** Oxalic acid dihydrate  
**Catalog Numbers:** AC129600000, AC129600010, AC388100000, AC423150000, AC423150010, AC423150050, AC423150050, S80113, A218-3, A218-500, A219-250, A219-3, A219-50, A219-500, A219J500, NC9667432  
**Synonyms:** Ethanedioic acid dihydrate.  
**Company Identification:** Fisher Scientific  
One Reagent Lane  
Fair Lawn, NJ 07410  
**For information in the US, call:**  
201-796-7100  
**Emergency Number US:**  
201-796-7100  
**CHEMTREC Phone Number, US:**  
800-424-9300

### Section 3 - Hazards Identification

**EMERGENCY OVERVIEW**

Danger! May cause kidney damage. Harmful if swallowed, inhaled, or absorbed through the skin. Causes burns by all exposure routes. Possible risk of harm to the unborn child. Target Organs: Kidneys, heart, eyes, skin, brain, nerves, mucous membranes.

**Potential Health Effects**

**Eye:** Causes eye burns. May result in corneal injury. Causes redness and pain.

**Skin:** Harmful if absorbed through the skin. Causes severe skin irritation and possible burns. Rare chemical burns may occur from oxalic acid and may cause hypocalcemia. Gangrene has occurred in the hands of people working with oxalic acid solutions without rubber gloves. The skin lesions are characterized by cracking of the skin and the development of slow-healing ulcers. The skin may be bluish in color, and the nails brittle and yellow.

**Ingestion:** Causes gastrointestinal tract burns. Oxalic acid is toxic because of its acidic and chelating properties. It is especially toxic when ingested. As little as 5 grams (71 mg/kg) may be fatal. Ulcerations of the mouth, vomiting of blood, and rapid appearance of shock, convulsions, twitching, tetany, and cardiovascular collapse may occur following ingestion of oxalic acid or its soluble salts. Oxalic acid can bind calcium to form calcium oxalate which is insoluble at physiological pH. Calcium oxalate thus formed might precipitate in the kidney tubules and the brain. Hypocalcemia secondary to calcium oxalate formation might disturb the function of
the heart and nerves.

**Inhalation:** Causes chemical burns to the respiratory tract. Inhalation of oxalic acid dust or vapor produces irritation of the respiratory tract, protein in the urine, nosebleed, ulceration of the mucous membranes, headache, nervousness, cough, vomiting, emaciation, back pain (due to kidney injury), and weakness.

**Chronic:** Inhalation of oxalic acid dust or mist over a long period of time might result in weight loss and respiratory tract inflammation. Rats administered oxalic acid at 2.5 and 5% in the diet for 70 days developed depressed thyroid function and weight loss. A study of railroad car cleaners in Norway who were heavily exposed to oxalic acid solutions and vapors revealed a 53% prevalence of urolithiasis (the formation of urinary stones), compared to a rate of 12% among unexposed workers from the same company.

---

### Section 4 - First Aid Measures

**Eyes:** In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical aid immediately.

**Skin:** In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical aid immediately. Wash clothing before reuse.

**Ingestion:** If swallowed, do NOT induce vomiting. Get medical aid immediately. If victim is fully conscious, give a cupful of water. Never give anything by mouth to an unconscious person.

**Inhalation:** If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

**Notes to Physician:** Treat symptomatically and supportively.

**Antidote:** Intravenous administration of calcium gluconate or calcium chloride may be required if hypocalcemia or hypocalcemic tetany occur.

---

### Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. Use water spray to keep fire-exposed containers cool.

**Extinguishing Media:** Use water spray, dry chemical, carbon dioxide, or alcohol-resistant foam.

**Autoignition Temperature:** Not applicable.

**Flash Point:** Not applicable.

**Explosion Limits:** Lower: Not available

**NFPA Rating:** health: 3; flammability: 1; instability: 0;

---

### Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Vacuum or sweep up material and place into a suitable disposal container. Avoid runoff into storm sewers and ditches which lead to waterways. Clean up spills immediately, observing precautions in the Protective Equipment section. Avoid generating dusty conditions. Provide ventilation.

---

### Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Minimize dust generation and accumulation. Do not get in eyes, on skin, or on clothing. Do not ingest or inhale. Discard contaminated shoes. Use only with adequate ventilation.
Storage: Keep container closed when not in use. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

Exposure Limits:

<table>
<thead>
<tr>
<th>Chemical Name</th>
<th>ACGIH</th>
<th>NIOSH</th>
<th>OSHA - Final PELs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oxalic acid, anhydrous</td>
<td>1 mg/m3; 2 mg/m3</td>
<td>1 mg/m3 TWA 500</td>
<td>1 mg/m3 TWA</td>

OSHA Vacated PELs: Oxalic acid, anhydrous: 1 mg/m3 TWA Oxalic acid dihydrate: None listed

Personal Protective Equipment

Eyes: Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.

Section 9 - Physical and Chemical Properties

Physical State: Powder

- Color: white
- Odor: odorless
- pH: 1.3 (0.1M soln)
- Vapor Pressure: .92 mm Hg @ 60 deg C
- Vapor Density: 4.62
- Evaporation Rate: Not available
- Viscosity: Not available
- Boiling Point: Not applicable.
- Freezing/Melting Point: 101 deg C sublimes

Section 10 - Stability and Reactivity
**Chemical Stability:** Stable under normal temperatures and pressures.

**Conditions to Avoid:** Dust generation, excess heat.

**Incompatibilities with Other Materials**
- Strong oxidizing agents
- Mercury
- Hypochlorite
- Silver
- Strong alkalies
- Chlorites
- Furfuryl alcohol

**Hazardous Decomposition Products**
- Carbon monoxide
- Carbon dioxide
- Formic acid

**Section 11 - Toxicological Information**

**RTECS#:**
- CAS# 144-62-7: RO2450000
- CAS# 6153-56-6: None listed

**LD50/LC50:**
- **CAS# 144-62-7:**
  - Draize test, rabbit, eye: 250 ug/24H Severe;
  - Draize test, rabbit, skin: 500 mg/24H Mild;
  - Oral, rat: LD50 = 7500 mg/kg;

- **CAS# 6153-56-6:**
  - None listed

**Carcinogenicity:**
- Oxalic acid, anhydrous - Not listed as a carcinogen by ACGIH, IARC, NTP, or CA Prop 65.
- Oxalic acid dihydrate - Not listed as a carcinogen by ACGIH, IARC, NTP, or CA Prop 65.

**Epidemiology:**
A study of railroad car cleaners in Norway who were heavily exposed to oxalic acid solutions and vapors revealed a 53% prevalence of urolithiasis (the formation of urinary stones), compared to a rate of 12% among unexposed workers from the same company.

**Teratogenicity:**
No information found

**Reproductive:**
Oxalic acid caused kidney damage in fetal sheep and rats and disturbed the estrus cycle in rats. Increased sperm abnormalities were seen in the second generation of mice administered 0.2% oxalic acid in the drinking water.

**Neurotoxicity:**
No information found

**Mutagenicity:**
No information found

**Other:**
- Not available

**Section 12 - Ecological Information**

**Ecotoxicity:**
- Fish: Bluegill/Sunfish: LC50 = 4000 mg/L; 24 Hr.; Static Conditions
- Fish: Mosquito Fish: LC50 = 1350 mg/L; 24 Hr.; Static Conditions

**Section 13 - Disposal Considerations**

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification. RCRA P-Series: None listed. RCRA U-Series: None listed.

**Section 14 - Transport Information**
