

HOW DOES **MATH AT HOME** HELP CHILDREN STARTING SCHOOL?

MATH AT HOME

Any at home math-related resource that supports your child's math learning, including:

Goals & expectations

Games & activities

Toys & learning material

NO 'ONE-WAY TO MATH'

A wide variety of different math activities can help build the foundation of children's basic math skills.

PARENTS' EXPECTATIONS MATTER

Joining-in, encouraging and showing confidence in your child's math skills can greatly promote positive math experiences.

UNDERSTANDING NUMBERS

Counting, matching, sorting numbers and objects can help children learn about math symbols, numbers, and rules.

LEARN THROUGH PLAY

Cooking, solving puzzles, and playing board games can let children explore shapes, patterns and problem-solve.

PREPARING FOR SCHOOL

Small everyday math builds children's confidence and prepares them for future learning in school.

FUTURE MATH SUCCESS

Early on, children learn best from hands-on math activities. As they get older, they can start applying math to the world around them.
