||◆ 副 |> ||◆ 国 |> ||◆ 国 |>

Topics to be covered

- Typeface
- Font size
- Special characters
- Hyphens and dots
- Spacing
- Examples
- Summary

-∢ ≣ →

- E

Use the following commands to get different types of fonts in your document in text mode:

- Bold face: \bf{content}
- Italic face: *it*{*content*}
- Emphasized text: *emph{content}*
- Typewriter: \texttt{content}
- Slanted text: \textsl{content}
- Small capitals: \textsc{content}
- Upper case: \uppercase{content}

Image: A = A

Use the following commands to get different types of fonts in your document in mathematical mode:

- Math bold face: \mathbf{content}
- Math italic face: \mathit{content}
- Math typewriter: \mathtt{content}
- Math calligraphic letters: \mathcal{content}

イロト 不得 とうせい かほとう ほ

- Default font size: \normalsize is 10 points, but can be even 11 and 12 depending on the type of document
- All the following commands change the size of the text embedded within the command
- Cannot be used in the mathematical mode
- Following commands are in the increasing order of the font size:
 - {\ tiny write your content here}
 - {\ scriptsize write your content here}
 - {\ footnotesize write your content here}
 - {\small write your content here}

- () {\normalsize write your content here}
- {\large write your content here}
- {\Large write your content here}
- {\LARGE write your content here}
- {\huge write your content here}
- {\Huge write your content here}

Special characters

Some of the special characters that can be included in your document are the following:

- Backslash: \setminus
- Ampersand: &
- Hash: #
- Percent: %
- Curly brackets: { and }
- Text circled: (a)
- Copyright: ⓒ

All of the above can be included into your text by typing the command \setminus followed by any of the above mentioned character, for example, $\backslash\&$

- Minus sign: 0, 1 and -1
- Hyphen: simple-easy-enjoyable
- En dash: Figure 1 -- Figure 5 generates the output as the following: Figure 1 -- Figure 5
- Em dash: Table 1 --- Table 10 generates the output as the following: Table 1 — or Table 5

イロト イポト イヨト ・ヨ

- To generate the following output: *applied mathematics department*, *pure mathematics department*, *..., there might be a spacing issue with the dots at the the end of the sentence.*
- Replace the dots with the command \dots: applied mathematics department, pure mathematics department, ...
- To generate the following output in mathematical environment 10+11+...=100
- Replace the dots with the command $\label{eq:loss}$ 10+11+...=100
- If you want the dots to be centered in the above mathematical equation use the command \cdots to obtain: $10 + 11 + \cdots = 100$

- Extra spaces are ignored by LATEX and the output file looks much better than the source file.
- \newline or \\ (short form): to start a new line
- *newpage*: to start a new page
- *linebreak*: makes a line break at this point
- \pagebreak: makes a page break at this point

イロト イポト イヨト ・ヨ

A quad is equal to the length of the font size, say, 1 quad = 11 pt with 11 pt font size. The following are the commands that can be used for spacing:

- *ab*: The generated output doesn't have any space between *a* and *b*
- \quad Generates 1 quad space
- \qquad Generates 2 quad space
- \backslash , Generates 3/18 quad space
- $\langle : \text{ Generates } 4/18 \text{ quad space} \rangle$
- \langle ; Generates 5/18 quad space

Other spacing commands

- To add some horizontal space between sentences, paragraphs or equations, use the command \hspace{length}
- For some vertical space between sentences, paragraphs or equations, use the command \vspace{length}

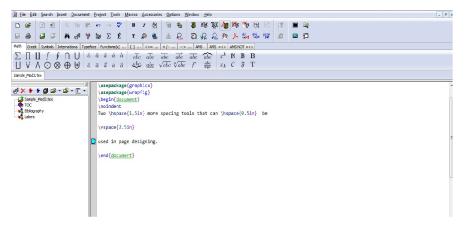

Fig5: Snap shot- vertical and horizontal spacing commands

Subscripts and superscripts

- Subscripts are specified by a underscore operator (_)
- Superscripts are specified by a caret operator (^)
- Content should be enclosed with curly braces after the operator
- Double subscript or double superscript can be done only with enclosing the first level in braces
- Following slide gives several examples of using subscripts and superscripts

イロト 不得 トイヨト イヨト 二日

Braces

Commands for different sizes of braces are:

- Left braces:
 - \bigl(
 - \Bigl(
 - \biggl(
 - \backslash Biggl(
- 2 Right braces:
 - \bigr)
 - \Bigr)
 - \biggr)
 - \Biggr)

For curly brackets use the same commands, but replace the left open brace (by { and right open brace) by }

- 4 同 6 4 日 6 4 日 6
