

Multi-sectoral Partnerships in Chronic Disease Prevention: Implementing a Collaborative Policy Research Approach

Presenters:

Julie Greene, Manager, Centre for Chronic Disease
Public Health Agency of Canada

Cameron Willis, Scientist
Propel Centre for Population Health Impact

Julie and Cameron will discuss their research currently underway to capture the reach, unanticipated effects and design features of the Agency's Multi-sectoral Partnerships Approach to Promote Healthy Living and Prevent Chronic Disease. Working with Propel has provided the Agency the opportunity to capture and leave behind important evidence on the 'why' and 'how' of multi-sectoral partnerships in public health, and together we have implemented a program of research with direct policy and immediate policy relevance for the Government and our partners.

This seminar will overview Multi-sectoral Partnerships approach, the impetus and operating context for collaborative research program, as well as explore questions and methods to capture partner reach and resources, unanticipated effects and partnership design.

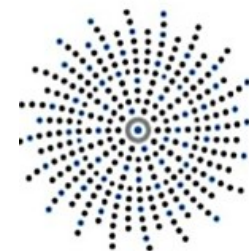

Wednesday January 20, 2016 | 12:00 - 1:00pm

DC | Room 1302

Light lunch will be provided
