ARE COVID-19 TREATMENTS RIGHT FOR YOU?

YOU MAY BE AT RISK FOR HOSPITALIZATION FROM COVID-19 IF YOU...

○ Are unvaccinated or partially vaccinated.
  Partially vaccinated means having only 1 or 2 vaccine doses.

○ Are over 60 years old.

○ Have a weakened immune system.
  This includes people who have specific health conditions (e.g., Common variable immunodeficiency [CVID]) or who take certain drugs that affect the immune system (e.g., chemotherapy).

○ Have other health risks.
  Examples include obesity, diabetes, lung disease, heart disease, liver disease, kidney disease, cerebral palsy, intellectual disability (e.g., Down syndrome), and sickle cell disease.

○ Are pregnant.

⚠️ Your risk increases with more risk factors ⚠️

If one or more of these describe you +

You have symptoms of COVID-19 that started in the last 5-7 days (e.g., fever, cough, change in sense of taste/smell, sore throat, stuffed nose, headache, tiredness, vomiting or diarrhea)

YOU MAY BENEFIT FROM TREATMENT
Even if symptoms are mild.

Treatment may include:
Paxlovid™, remdesivir, fluvoxamine, or budesonide.

Do a test now
A rapid antigen test (RAT) or PCR test.
If you have a negative RAT and symptoms, call to get a PCR test.

Make a call
Call your primary care provider, pharmacy, or provincial tele-health.

Ask about treatment
No matter where you live, you should be able to access treatment.
Treatment must be started as soon as possible to work.
