

## COVID-19

**Viral vector vaccines use a safe virus to carry some of the genes of SARS-CoV-2 to teach the body how to recognize it.**

COVID-19

mRNA vaccines give the human body instructions on how to make a protein from the SARS-CoV-2 virus.

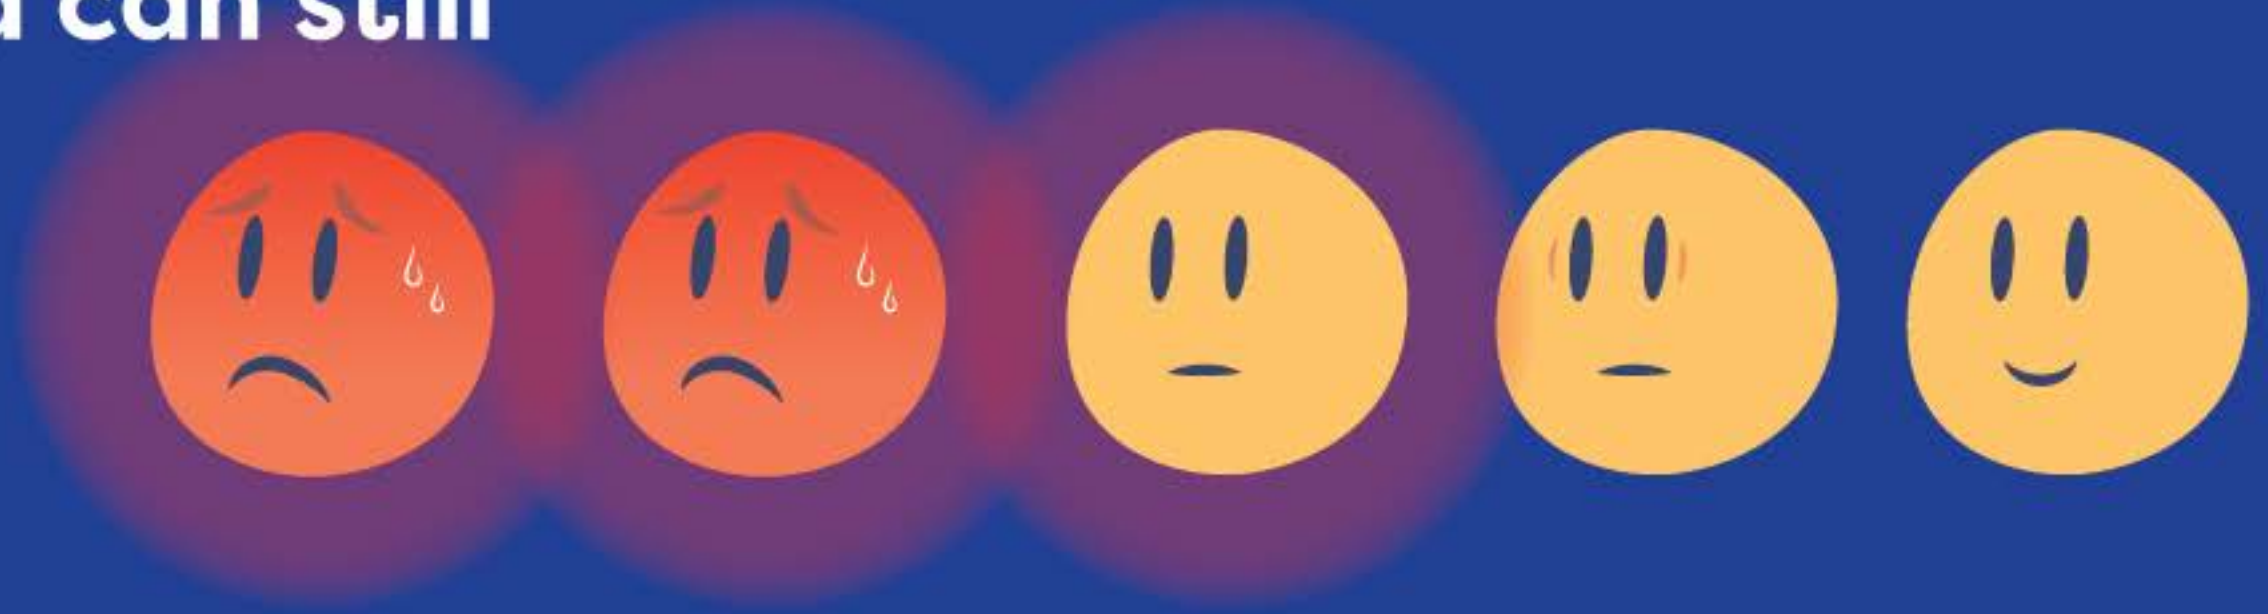

## COVID-19

With public health authorities encouraging everyone to get a flu shot to avoid a “twindemic,” plan ahead to avoid line-ups this year.

COVID-19

Asymptomatic does not mean you have A symptom. It means you have NO symptoms and can still infect others.

## COVID-19

The mRNA vaccine is like a most wanted poster that tells your body how to recognize COVID-19. It can't and won't change your DNA.

**COVID-19**

**Got the vaccine? Be proud and make it public. People are more likely to get a vaccine if their healthcare provider also got it.**
