# Check-up for Acute Opioid Prescriptions

For short term pain. Most useful for surgery, less useful for low back pain and musculoskeletal injuries.

# **Assess The Patient**

## **Alternative Solutions**

- Acetaminophen and/or NSAIDs (oral, topical)
- Anticonvulsants (e.g., pregabalin, gabapentin) •
- Antidepressants (e.g., amitriptyline, nortriptyline, and duloxetine)
- Non-drug therapy (heat, ice, massage, stretching, and rest)

#### Anticipate Side Effects

- Constipation
- Nausea, vomiting
- Excess sedation Sleep apnea
- common with opioids than non-opioids

GI side effects are more

## **Increased Risk of Overdose**

Offer naloxone if any of the following are present:

- Chronic lung disease (asthma, COPD), sleep apnea
- Sedating agents (alcohol, benzos, muscle relaxants)
- Kidney, liver, and/or cardiac dysfunction •
- History of overdose, illicit/recreational drug use
- Frail older adults
- People with children or teens at home

### **Risk of Opioid Use Disorder** Opioid Risk Tool\*

- Family or personal history of substance use
- History of preadolescent sexual abuse
- Mental illness
- Age between 16 45 years

# **Assess The Drug**

## **Calculate Morphine Equivalent Dose**

Try to stay below 50 MED for short term opioids

50 MED
50 mg/day
334 mg/day
10 mg/day
33 mg/day
160 mg/day
300 mg/day

## **Drug Choice**

 Question prescriptions for fentanyl, meperidine, methadone, and pentazocine for acute pain as there are better choices

## **Prescription Length**

- Ideally less than 3 days, no more than 7
- Use for more than 7 days is associated with withdrawal and chronic use

#### Prevent Diversion Remind every patient:

- Return unused opioids to the pharmacy
- Do not share with family or friends
