New Mobility & Active Transportation Survey

Thank you!

Thank you for your interest in the New Mobility & Active Transportation Survey. This study is being completed by researchers at the School of Planning in the Faculty of Environment at the University of Waterloo on behalf of the City of Waterloo.

What was the survey about?

This research study gathers data from active road users, to find out how e-scooters are impacting active transportation in Waterloo. Participants are asked seven questions about their trip that day plus three broad questions about age, gender and residential status (participants cannot be identified by this material). Survey participants are selected because they were walking, cycling, or riding scooters, skateboards, or rollerblades. The aim of the survey with active transportation users was to find out 1) the purpose and distance of their trip; 2) their preference for active modes over others; 3) their encounter with transit infrastructure and, 4) their interaction with other road users.

What are the benefits of the survey?

The results from this survey will be shared with the City of Waterloo to shape municipal policy around active transportation.

When will I see the survey results and analysis?

The data results and analysis will be made public late 2019.

Who do I contact if I have further questions and feedback?

If you have questions about the study, please contact myself at r krauser@uwaterloo.ca or Dr. Jennifer Dean from the School of Planning, University of Waterloo 519-888-4568 x 39107 or by email at Jennifer.dean@uwaterloo.ca.

Research Ethics

This study has been reviewed and received ethics clearance through a University of Waterloo Research Ethics Committee (ORE #41186). If you have questions for the Committee contact the Office of Research Ethics, at 1-519-888-4567 ext. 36005 or ore-ceo@uwaterloo.ca.
