Syllabus Psychology 363 Winter 2021

Computing and Psychological Research

Britt Anderson

Jan 2021

1 Instructor and TA Information

Role	Name	Email	Hours
Instructor	Britt Anderson	britt@uwaterloo.ca	By email
TA	Hanbin Go	h2go@uwaterloo.ca	By email
TA (part time)	Sixuan (Irene) Chen	s743chen@uwaterloo.ca	By email

1.1 Office Hours

This will usually be by arrangement and will use the MS Teams Tool. If you contact me or the TA we can arrange a live session. In addition, depending on the problem and how many people are interested we might be able to make a small screen cast to demonstrate a problem solution. Write us and we will help. To use this option you should make sure you have MS Teams installed (it runs on Macs/PC's, and linux).

2 Course Description

2.1 Course Goal:

Improve your ability to use your computer as a tool for academic activities. This leads to the following learning objectives

2.2 Learning Objectives:

- Learn how to install software.
- Learn how to work from the command line.
- Learn the rudiments of programming sufficient to allow further progress through self study.
- Learn about the use of libraries to enable programming psychological experiments.

- Learn how to use version control
- Learn how to write papers that blend code and analyses to generate reproducible research reports. This includes learning
 - how to use citation databases
 - generate graphics of analyses
 - conduct statistical analyses
 - generate multiple output formats from a single source file.

2.3 Course Mechanics

To meet the learning objectives you will need to be **doing** much more than listening or observing. You will also need to break old habits. That means in the beginning it will be harder to do simple things. It also means that in the future things that used to be impossible for you to do will now be possible (but they may still not be easy). Combining computer skills with with your psychology content knowledge makes you more attractive to employers and on a graduate school application.

Thus, this course will require you to use the Linux operating system (the XUbuntu flavor) and tools available within that space. Later on, after this course, if you wish to return to the world of OSX and Windows10 you will know what you are looking for, and you will have the skills necessary to make it available.

For our remote offering I will provide you with a series of activities on approximately a weekly basis, as if were meeting in a class a couple of times a week. The assessments are exercises that individually are worth only a small number of points. My prediction is that by the end of the course you will have amazed yourself by how much you have learned and how much you can now do. You will have the confidence and the basic skills to grow your capabilities through independent study.

2.4 Required Text

None

I will provide you with tasks and online resources, tutorials, and guides that contain the information you need to complete those task. You will then collaborate with me, your TA, and your classmates to accomplish those task. Expect to spend a lot of hours on some of these assessments. If you make a sincere effort to do the assessments your grade will be fine.

The main sources you will need, in addition to the Learn site for submitting assignments are:

- 1. The Github Repository for Course Material
- 2. The "practice" github repositorywhere you learn to use github more.

3. The Vimeo Course Channel where numerous videos are housed that support the online notes and demonstrate many of the tools and techniques you are learnig.

2.5 Course Outline

As the course is being done in a remote format you have the freedom to proceed at your own pace, but I have scheduled the assignments so that you will follow a consistent pace and not end up at the end of term overwhelmed and unable to complete things successfully. This course is a marathon not a sprint. Look at Learn to see what assignments are due when. Some assessments are elementary. Others will be quite challenging and time consuming. Some assessments require only uploading a screen shot. Others require you to write some computer code. Keep making progress. Don't let yourself get stalled. What follows is general advice for how to regulate your pace. It omits considersations of holidays and breaks. You can do things early or delay things as your schedule permits, but if you follow the guidance below you will have plenty of time for all the content, and you should have the final period left over for your other more traditionally structured classes.

Week	Date	Topic
0	Jan	Course Introduction
1	Jan	Rstudio (intro)
2	Jan	Installing OS and Software - Linux
2	Jan	More time for installation and command line basics/Emacs
3	Jan	Python
4	Feb	R
5	Feb	Data Handling in R and Python
6	Feb	Introduction to Plotting
7	Feb	Programing Psychology Experiments in Python
8	Mar	Writing Research Reports
9	Mar	Final Proj Session 1: Programming your Experiment
10	Mar	Final Proj Session 2: Data Collection
11	Mar	Final Proj Session 3: Analysis and Start of Report Drafting
12	Apr	Final Projects Due and Presentations

2.6 Grades

Your grade in this course will be made up of participation, assignment, and final project components. In addition, there is the option to earn extra credit for research participation.

Component	Proportion
Research	+ 4%
Assignments	50%
Final Paper/Project	30%
Participation	20%

Participation can be hard to judge in an online course. How will I evaluate this?

- are your assignments coming in a timely fashion?
- are you responding to my comments?
- are you a participant in the class discussions on Learn?
- are you posting **and** responding to issues on the course Github page?
- have you ever sent me or the TA and email and discussed anything at all with us?

2.6.1 Components Further Explained

- **Research** As this course is devoted to learning research relevant skills participating in research studies can be a useful way to better understand the participant's perspective when you design your studies. This is especially true for on-line work. I encourage you, even if you do not need the credits, to consider research participation for the perspective it will give you on the tools and techniques you learn in this course. I will provide extra credit of up to 4% in value for research participation. Half of these credits can be for Online studies and students may complete Mass Testing. If you are taking multiple psychology courses do be careful about assigning your credits to eligible courses. If you are unfamiliar with the system this 14 minute video prepared by the Research Experience Group may be useful. In addition, there is a word doc explaining additional details in the same folder as this syllabus document.
- Assignments I have created many assessments. This is so that as you go along you will have the chance to get frequent feedback on your work and since the weight of any one assignment is small you don't need to obsess over them. If you don't get something right away: Move on. These assignments are described as text files that initially will be placed on learn, but for later assessments will be available via the github course page. Submissions will be via Learn; that signals to me that you have completed the assignment. In some cases the actual work will not be something that you can submit in Dropbox (e.g. that you have created a github issue). Just put a text file in there saying you are done so that I know to check your work. The grades will be recorded in Learn so that you can track your performance.

Participation see above.

Final Project This will be the most challenging component. Contrary to first impressions a group project in a remote learning environment is actually a good thing. Think of all the companies that are requiring work from home. And read all the tech companies for whom work from home is becomeing the new standard. Learning how to collaborate with remote group members is an extremely valuable skill. You will submit your final

project as a collection of files. The group will program an experiment, collect some toy data, analyze that data, and report it as a reproducible research report. The paper will outline the motivations for a simple experiment with consistently styled citations (at least five (5)) cited in the text and included in a bibliography at the end. It will describe the method of the experiment that you will program in Python using the Psychopy library. Source code should be included as an appendix or as a separately uploaded file. Data will be collected from classmates or group mates or friends and family. This will not be real research data, but will just provide the subtrate for analysis and plotting. The final report will include simple summary statistics and at least two plots visualizing pertinent aspects of the data. This report must be reproducible. This means that from your files and the collected data I can recompile the report getting all the stats and figures that you did. You can use any format that allows me to compile the final paper from the data files and the source files (not intermediate files like jpgs or tables that you have prepared separtely and earlier), which you are also required to submit. The .org format is the one that is demonstrated in the course

3 Late Work Policy

For a guarantee of full credit work should be turned in on time as specified in the Learn Dropboxes. However, as this is a class dedicated to doing, and our remote delivery leaves less opportunities for interaction I will grade all assignments no matter how late they are turned in, and in many cases it will still be possible to get full credit, but it is *not* guaranteed.

4 Plagiarism

Don't use other people's work **without attribution**. Don't steal other people's code, but do use other people's code liberally. The difference is attribution and acknowledgement. I want you to collaborate and teach each other as well as yourselves. Just be open about it and acknowledge it and there will be no problems.

5 Attendance

Not applicable.

6 Boiler Plate

6.1 Academic Integrity

In order to maintain a culture of academic integrity, members of the University of Waterloo are expected to promote honesty, trust, fairness, respect and responsibility. See the Office of Academic Integrity webpage for more information.

6.2 Discipline

A student is expected to know what constitutes academic integrity, to avoid committing academic offences, and to take responsibility for his/her actions. Check the Office of Academic Integrity for more information. A student who is unsure whether an action constitutes an offence, or who needs help in learning how to avoid offences (e.g., plagiarism, cheating) or about rules for group work/collaboration should seek guidance from the course professor, academic advisor, or the Undergraduate Associate Dean. When misconduct has been found to have occurred, disciplinary penalties will be imposed under Policy 71 Student Discipline. For information on categories of offenses and types of penalties, students should refer to Policy 71 - Student Discipline. For typical penalties check Guidelines for the Assessment of Penalties.

6.3 Grievance

A student who believes that a decision affecting some aspect of his/her university life has been unfair or unreasonable may have grounds for initiating a grievance. Read Policy 70 - Student Petitions and Grievances, Section 4. When in doubt, please be certain to contact the departments administrative assistant who will provide further assistance.

6.4 Appeals

A decision made or penalty imposed under Policy 70 - Student Petitions and Grievances (other than a petition) or Policy 71 - Student Discipline may be appealed if there is a ground. A student who believes he/she has a ground for an appeal should refer to Policy 72 - Student Appeals. Note for Students with Disabilities The AccessAbility Services office, located on the first floor of the Needles Hall extension (NH 1401), collaborates with all academic departments to arrange appropriate accommodations for students with disabilities without compromising the academic integrity of the curriculum. If you require academic accommodations to lessen the impact of your disability, please register with the AS office at the beginning of each academic term.
