Sex, Drugs and Rock ’n’ Roll: Can We Live Forever?

Thursday, March 27, 2014
4 p.m.
Centre for Environmental and Information Technology (EIT)
Room 1015

Limited Seating | Registration encouraged
Complimentary reception to follow in EIT atrium

In this presentation, Neil will explore the sometimes surprising factors that influenced the rapid increase in life expectancy over the past century, and analyze future potential drivers of life expectancy such as regenerative medicine. He’ll also provide his views on the practical implications of increasing life expectancy, including its impact on society and on the financial services industry.
