

# ROLLED BEESWAX CANDLES

1. Take one piece of wax. Place it so one of the short sides is facing you.
2. Press the wick along the edge of one of the short sides. The wick should be flush one side and stick out on the other.
3. Roll the wax over the wick. Press down to make it as tight as possible.
4. Keep rolling. After every rotation, press down onto the table to maximize the tightness.

5. Once you reach the end of your first piece of wax, use the heat from your fingers to press the edge of the wax into the candle.

6. Lay your candle on your 2<sup>nd</sup> piece of wax, mold the edge into your candle and start rolling.

7. Continue as before until you reach the end of your wax.

8. You can either add a 3<sup>rd</sup> piece of wax or finish off your candle.

9. To finish the candle, press the bottom onto the table to make a flat edge. Use your fingers to mold the wax around the wick at the top.
