

Strategic Test Plan

Strategic Test Plans document the overall testing strategy to be used for all testing in a project area (campus community, admissions, records, financial aid, student financials, centre for extended learning, IAP or cross-functional), or for specific project(s) and/or business process(es) within one of those project areas. At least one overall strategic test plan must be on file for each project area. It is likely that a different strategy will be needed and documented for projects of different types (i.e. PeopleTools / Security patches vs People Tools & Application Upgrades vs UW Development).

Identification:

Functional Area:	x	
Business Process(es):	x	
Project No./Title(s):	x	
Project Type:	x	(patches / upgrades / development)
Functional Leader(s):	x	
Date / Revision Number:	x	

Testing Strategy / Overall Approach:

Describe the overall approach(es) to be used in the testing to ensure the software and associated procedures meet institutional and departmental requirements.

Coverage Summary:

At a summary level, what is to be tested using this strategy?

Testing Responsibility:

At a summary level, who is responsible for what testing?

Testing Environment to be Used in Testing:

What are the testing environments to be used in testing to ensure coverage for workstation and browsers (etc.) in use by relevant administrative departments and academic faculties / departments across campus.

Accessibility Testing:

What testing will be done to ensure compliance with accessibility legislation requirements?

Stress / Load / Volume Testing:

What specialized testing will be done for stress, load and/or volume testing requirements?

Comments:
