

1. Framed-Line Task – Absolute Task

In this study, you will look at a square with a line inside of it. After a couple of seconds, you will be asked to flip the page, and then you will see a square that is bigger, smaller, or the same size as the first square. In this second square, please draw a line that has the *same exact* length as the first square. See the examples below for an illustration:

Also, please do not use your pen or finger to measure the lengths of the lines.

Please do not flip the page until the experimenter tells you to do so.

2. Framed-Line Task – Relative Task

In this study, you will look at a square with a line inside of it. After a couple of seconds, you will be asked to flip the page, and then you will see a square that is bigger, smaller, or the same size as the first square. In this second square, please draw a line that has the same *relative* length as the first square. See the examples below for an illustration:

Also, please do not use your pen or finger to measure the lengths of the lines.

Please do not flip the page until the experimenter tells you to do so.
