# Set Up

## Response to a Single Meal

Fast for 6 hours then give meal of one of the following types:

### Meal only

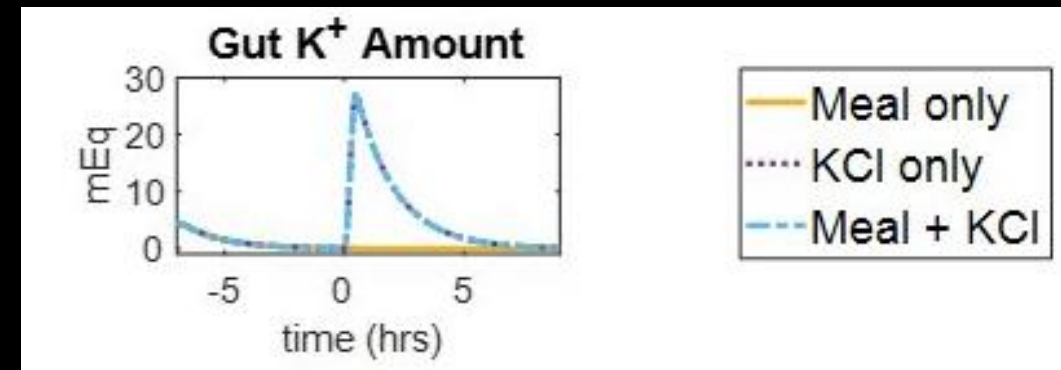

- No  $K^+$  input
- Insulin effect

### KCl only

- Only  $K^+$  input
- No insulin effect

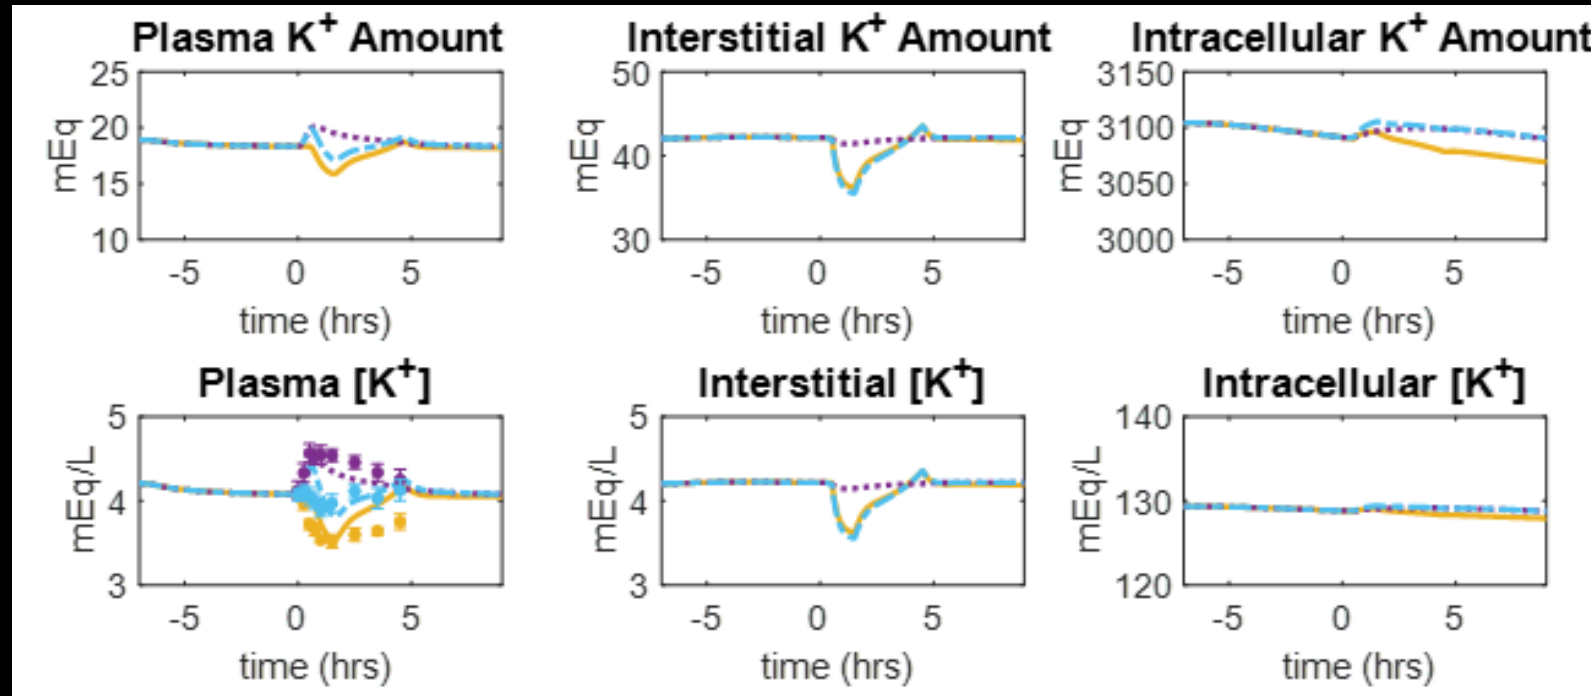

### Meal + KCl

- Typical meal
- Includes both  $K^+$  input and insulin effect

Model input for single meal

# Results

Modification + Further  
Investigation:  
Effect of Insulin on  
Potassium Homeostasis

# Insulin, Diabetes and Potassium Homeostasis

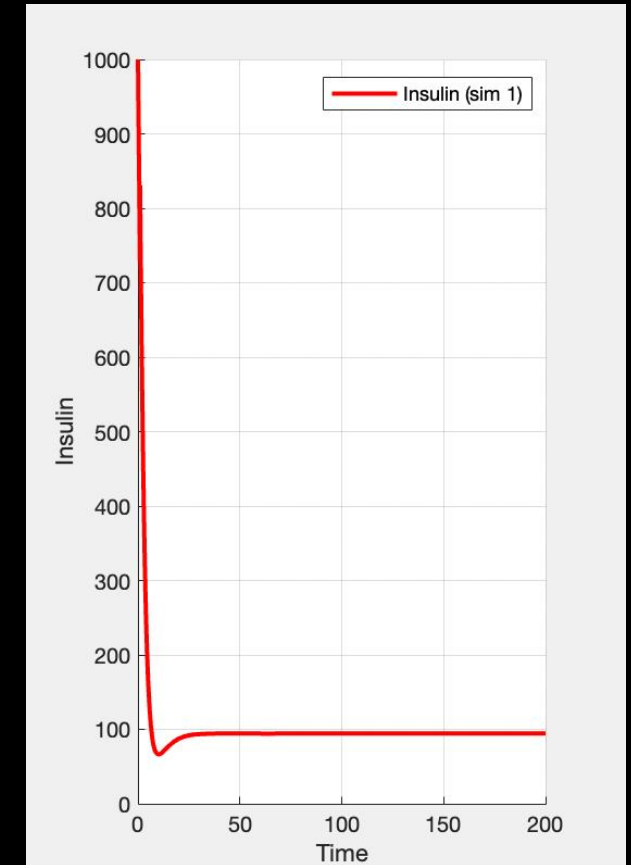

- Facilitates uptake of potassium
- Regulation of potassium secretion
- Impact on electrolyte balance
- Hyperkalemia in diabetes patients
- Use ODE to explore clinical applications

# Modification and Results

- The Equations we use:  
$$dG/dt = G_{in\_ss} - aG - bGI$$
$$dI/dt = I_{in\_ss} + cG - dI / (e + I)$$
