Peer review is one of a number of revision and proofreading strategies available to you. While there are many ways to structure peer review sessions, at its core, this technique involves soliciting feedback on one or more aspects of your writing from classmates or colleagues.

Peer Review: Purpose and Scope

**Purpose**

While peer review has the obvious benefit of getting feedback on your writing, it also has benefits for the person doing the reviewing:

- We become better writers by being diligent peer reviewers
- We learn good writing habits by writing often and by reading the writing of others
- Giving feedback requires us to think carefully – not only about what we think about someone’s writing, but also about how writing is constructed and why we are making specific suggestions.

**Scope**

It is up to individual peer review groups to determine what aspects of writing a given session (or series of sessions) will look at. Broadly speaking, the following aspects of writing are the ones that you could potentially focus on:

- **Content**: arguments, analysis, logic, evidence
- **Structure**: organization, transitions, connections
- **Style**: tone, word choice, formality
- **Mechanics**: punctuation, sentence structure, spelling

Avoid the urge to focus initially or primarily on mechanics. The revision and proofreading process will be more effective when you focus on **higher-order concerns** (content and structure) first and **lower-order concerns** (style and mechanics) second. See our handouts on revision and proofreading for more strategies that you can use.

Done correctly, the peer review process is a social, productive, and engaging way of participating in your discipline’s community of practice. However, though some instructors or supervisors will encourage their students to work together in a peer review process, others may require that projects be completed independently. In order to avoid any issues around **academic integrity**, make sure to consult with your instructor or supervisor before engaging in peer review.
Peer Review: Spaces

There are lots of spaces available for conducting peer review, including the following:

**Face-to-face**
- Classroom
- Coffee shop
- Someone's home

**Online**
- Skype
- Google Hangouts
- Google Docs
- Portal

Peer Review: Practice

**Steps in Peer Review**

1. **Write notes** for your reviewer on the peer review sheet and exchange papers. If you are not using a peer review sheet, discuss the specific questions or concerns that you'd like your reviewer to pay attention to.

2. **Read actively and critically**. Make notes in the margins of the paper or in the track changes feature if using Word. If using a review sheet, make general notes there, too.

3. Return the paper (and the review sheet, if you used one) to the original writer; **discuss the feedback** and **create an action plan** for revision and proofreading.

**Sample Peer Review Worksheet**

Feel free to adapt the template of a peer review worksheet on the following pages to suit your needs:
PEER REVIEW MARKING SHEET

Name of Writer: ________________________________
Name of Reviewer: ________________________________

Notes from the writer to the reviewer:
